- Op-amp based fuzz
- Why your clean blends suck
- PedalPCB Red Muffin Fuzz
- Obsidius Preamp - Darkglass B3K clone
- Panner blend
- Bass big muff trace
- Changing the mid scoop frequency spectrum
- Way Huge Pickle clone

v1

- use EQD Hoof tonestack
- ~~omit "bass boost" from bass big muff~~ - or rather not because it would be wasteful for a tl074
- gain of final makeup stage shall be ~2 (6dB)
- make the 68k series resistor in the bass blend path a 100k trimmer
- add passive master volume control
- make most blends trimmable/socketable

technical notes

- POM1615 pot datasheet
- Hestore 3PDT stompswitch
- DPDT Switch
- 1590BB on Hammond's site.
- Audio Jack
- DC Jack

TODO:

- create 3PDT footswitch daughter board. put the LED on there
- create 3d model for 3PDT footswitch using FreeCAD
- rethink the thing for a 1590BB
